SA POWER NETWORKS' SUNNY PLANS BEAR POWERFUL FRUIT

South Australia is a world leader in the adoption of rooftop solar energy. On the sunniest days, home owners now put more energy back into the grid than they take out. In late December, a new record was set with the distribution network operated by SA Power Networks exporting 185MW to the national grid. SA Power Networks' active support of rooftop solar has resulted in it receiving the South Australian Premier's Award for Innovation and Collaboration in Energy for its Enhanced Voltage Management Project. This project has improved substation voltage management and local network solar capacity for 80% of SA Power Networks' customers.
