WIND TRE IS IN THE HOUSE (OF EMERGING TECHNOLOGY)!

Twelve innovative new companies are going to be welcomed to the House of Emerging Technology of Rome to get a boost from Wind Tre and partners. The House of Emerging Technology will select tech start-ups using AI, blockchain, Internet of Things (IoT) or 5G to address two areas of strategic importance for the city of Rome: mobility and tourism. This partnership is co-financed by the Italian Ministry of Economic Development, select Roman universities and corporate partners including Wind Tre. The House will provide aspiring innovators and citizens with a home to develop and share ideas, test new technologies and transfer acquired knowledge.
